Knowledge Representation With Ontology

A session on ontology was conducted on 22/10/2020 on google meet platform. It was organized by Dr. Anupama Kaushik and Ms. Sonika Malik who convinced Dr. Archana Patel to enlighten us upon the topic of ontology. In her session she told us about what ontology is "it is a set of concepts and categories in a subject area or domain that shows their properties and the relations between them." Further in her session she explained about the career opportunities in this field and the effective ways to persuade them. It was a very interactive session as she tried to involve all the participants and helped them to express their views actively. She also guided the aspirants about the further steps that need to be taken to pursue ontology. She also elaborated about every individual doubt/question raised by students and also enlightened students about internship opportunities in this field. Addition, she provided her contact so that if anyone requires any kind of advice or instruction can freely contact her anytime. She even told us about her achievements and research on subjects which she studied in the past years. Overall, she created a very inspiring and ambitious atmosphere along with sharing the knowledge she gained while pursuing Masters in Ontology. At the end, we would like to thank the Department of Information Technology and special thanks to both the teachers Ms. Sonika Malik and Dr. Anupama Kaushik, who arranged such an informative session with Dr. Patel to share her life experiences with us and guide the aspirants towards success in the field of ontology.
