

Webinar Report: ZS Campus Beats & Hiring Process

Date: 28/03/2025

Time: 3:00 PM

Platform: Zoom Meeting

Organizer: ZS Associates along with Placement Committee MSIT (Convener-Dr. Meena Rao)

Host/Speaker(s): Mayank Mangla, Kenneth Lobow

Attended By: 3rd Year (Batch 2026 Students) (Approximately 200 attendees)

Introduction

A webinar was conducted to help aspiring engineers understand the ZS placement process and the key technical skills required in the industry. The session aimed to guide students on effectively preparing for the recruitment process, covering important aspects such as placement strategies, selection rounds, and technical assessments. It provided valuable insights into essential skills like data analytics, programming (Python, SQL), and problem-solving, helping students enhance their preparation and improve their chances of securing a job at ZS.

Agenda & Key Topics Covered: The webinar focused on providing insights into ZS's hiring process, particularly through its Campus Beats program. The key topics discussed included:

- Introduction to ZS and Its Work Culture: Overview of the company, values, and key service areas.
- Campus Beats Program Overview: Explanation of the structure, eligibility, and benefits of the program.
- ZS Hiring Process & Technical Roles: Detailed discussion on application procedures, interview rounds, and expectations for technical positions.

Speaker Highlights: The session featured insights from key ZS representatives who shared valuable perspectives:

- Discussed the importance of problem-solving skills and adaptability in ZS roles.
- Provided a walkthrough of the technical hiring process and common challenges faced by candidates.
- Shared real-life examples of successful ZS employees who joined through Campus Beats, illustrating career growth opportunities.

Audience Engagement & Participation

- Number of attendees: Approximately 200 participants joined the session.
- Type of participants: Included students from various universities, external guests, and ZS recruiters.
- Q&A session highlights: Participants inquired about interview preparation, required skill sets, and growth opportunities within ZS.

Key Takeaways

- ZS values analytical thinking, structured problem-solving, and collaboration in its hiring process.
- The Campus Beats program is an excellent gateway for students to secure roles in ZS, offering mentorship and hands-on experience.
- Technical assessments focus on data structures, algorithms, case studies, and business problem-solving.
- Candidates should emphasize practical experience, real-world project work, and effective communication skills during interviews.

Feedback & Suggestions

Suggestions for improvement:

- More interactive segments such as live case-solving or mock interview demonstrations.
- Additional insights from ZS alumni who successfully transitioned from students to full-time employees.
- Dedicated sessions for different technical roles within the company.

Conclusion:

The webinar successfully provided a comprehensive understanding of ZS's hiring process and career opportunities. The interactive discussions and real-world insights were particularly valuable to participants. Future sessions could enhance engagement by incorporating hands-on problem-solving exercises and more participant-driven content. The next steps include sharing additional resources with attendees and organizing follow-up sessions on role-specific hiring processes.

ZS project sample workflow

Sell

- Research prospective clients
- Research industry trends
- Identify issues and pain points
- Establish approach
- Deliver a proposal

Research

- Generate hypotheses
- Collect data
- Interview clients or customers
- Meet with management
- Conduct additional qualitative or quantitative studies

Analyze

- Build and analyze models (financial or other)
- Code programs, integrate systems, test and QC
- Synthesize findings

Recommend

- Develop a recommendation
- Deliver presentations
- Prepare initial communication/training materials
- Write reports
- Document team's work

Implementation

- Follow through on next steps of the project if the client likes the recommendation
- "Not all projects have an implementation phase but a lot of operational or technology-based projects take this step"

ZS has a very collaborative structure and offers expanded opportunities at multiple levels

Associate

- Gather and analyze data
- Develop hypotheses

Associate Consultant

- Manage team
- Draws conclusions from analysis
- Manages day-to-day interactions

Consultant

- Manages client projects
- Manages team members

Senior Consultant

- Manages client projects
- Often primarily a selling role
- Provides thought leadership

Manager

Director/Associate Principal/Partner

It's quiz time!

What key skills does ZS look for in candidates?

a) Problem-solving and analytical thinking
b) Ability to work in teams and communicate effectively
c) Adaptability and willingness to learn
d) All of the above

What evaluators look for

of evaluation must be taken into

to make the evaluation process more effective

to make the evaluation process more effective

to make the evaluation process more effective

to make the evaluation process more effective

to make the evaluation process more effective

to make the evaluation process more effective

to make the evaluation process more effective

Ex: Number of cups of tea consumed in Delhi in a week?

Identify

Assumptions

Calculate

Consolidate

Conclude

- Total population of Delhi: 16 Million
- Segment the population by age
 - Below 16 yrs. – 20%
 - 16-35 yrs. – 30%
 - 35-60 yrs. – 35%
 - 60 yrs. Above 20%

- Let's assume the number of cups of tea consumed by each age bracket
 - Below 16 yrs. – 1 cup a day
 - 16-35 yrs. – 3 cups a day
 - 35-60 yrs. – 2 cups a day
 - 60 yrs. Above – 3 cups a day

- Let's do the calculation
 - Cups of tea consumed daily
 - $1.20\% \times 30\% = 0.36\%$
 - $0.36\% \times 16\text{M} = 57,600$

- Now that we have arrived at an approximate number of cups of tea consumed daily in Delhi
 - Let's calculate number of cups consumed in a week
 - Total cups consumed in 8 weeks = 12.3 Million
 - 77 days = 16.1 Million

Based on all the assumptions, a total of 16.1 million cups are consumed in a week in Delhi.

The image displays two side-by-side screenshots of a Zoom meeting interface. Both screens show a video feed of a man in the top left corner and a Zoom toolbar at the bottom. The left screen displays a presentation slide titled "Some important points to remember" with the following content:

- Don't take the situation personally**
When asking about the number of traffic signals in your city, the interviewer wants to understand how you apply the above framework in solving the problem and not really how many signals there are in your city.
- Make notes**
In the hurry to solve, don't forget to make notes of each assumption and the calculations.
- Keep an eye on time**
It is important to be quick while solving—don't overthink. On average it takes 5-7 minutes to solve one problem.
- Be precise**
Summarize your approach concisely and communicate it to the interviewer.
- There is no right or a wrong answer. It is all about your approach.**

The right screen displays a "Q&A" slide with a background image of an audience member raising their hand. The Zoom toolbar at the bottom of both screens includes icons for audio settings, chat, raising hand, Q&A, show captions, more options, and a light icon.
